

Q ~~Some~~ Some people think that the best way to reduce crime is to give longer prison sentences. Others, however, believe there are better alternative ways of reducing crime.

⇒ The rate of crimes committed ~~is~~ are increasing at an alarming rate.

Some believe that it would be better if criminals are given longer prison sentences, while others believe there are various efficient alternative ways of reducing such crimes. This essay will be discussing both views but personally, I strongly agree ^{with the} former statement.

A major part of the society believe that people after being released commit more crime and hence they should be sentenced for longer imprisonment. There is a anger and a feeling of revenge in the mind of these criminals and

they do not fear to commit more crimes. Many people are also given bail ~~at~~ easily and they feel no fear therefore committing more offence.

Other way of reducing such illegal acts is to spread more awareness educating more and having ^{it is observed that} them employed. People after serving their sentence tend to commit more crime because they do not get employment. If with the help of Government we can aware such people of more job opportunities that they can do. On the other hand it will not only decrease the crime rate it will also make the economy better.

~~On conclusion though longer prison~~
on conclusion. Instead of increasing their sentence better solution would be to educate them and

give them more employment with the help of government. which would not only reduce crimes but also help in the countries economy.
