

In this evolved world, longevity of life is on a rise, due to which people as well as the community have had been facing certain issues like extensive population growth and resource scarcity, provided that the essay would be discussing these complications, along with the solutions too.

First and foremost, increase in life expectancy has been playing a major role in accelerating the issue of population growth, moreover escalating competition amongst individuals and society for land, foodstuffs, opportunities, just to name a few. For instance, while advanced health-care facilities have been proved to be a boon to India, however it has led to unemployment, due to extensively high rivalry, along with the growing worry of locating an appropriate house to reside in. (122)

Meanwhile, the above mentioned complications can be dealt with several effective solutions, such as organising awareness campaigns regarding a practical yet dependable usage of the various contraceptive methods like hormonal pills, IUD, vasectomy, so on and so forth. Another realistic as well as viable step that can be taken is implementing laws that forbid a single person from owning more than a fixed maximum limit of land holdings. A good example would be the concept of land ceiling in India that has been put into practice since several years now.

To summarize, immense progress in the field of health has had proved to be of great benefit to the humankind, however, this has also given birth to numerous difficulties like shortage of jobs, housing to name a few, nevertheless, reasonable methods can be opted to combat these.
