Q

Some people say that E-books and modern technology will totally replace traditional newspaper and magazines. To what extent do you agree or disagree.

Ans

Few people think that digital books and updated technology will take over paper newspapers and magazines. This essay will discuss the different statements about this trend and provide a logical opinion.

To begin with, in the modern era life is getting fast day by day, and people have very less idle time. Due to coming of e-newspapers in our life, it ^{has} become very easy to read newspaper anywhere and at any time, and people in modern cities are using this technology very efficiently. Therefore, with the help of modern technology the productivity of people has increased as most of their idle time

is consumed in doing useful work. Secondly, with the coming of digital technology in our lives a lot of paper is saved everyday and less waste is generated. Thus, by the use of this technology many trees are saved. For example, in earlier times people used to cut many trees for generating paper, but with the modern technology this practice has been stopped. These are the crucial benefits of e-digital content.

On the other hand, the rapid change in the technology sometimes become difficult for the older generation people to learn as their learning power gets decreased by ageing. Therefore, they are dependent on paper newspaper and magazines for reading. Secondly, before the coming of advanced technology, the paper content used to get printed in paper press, and by making printing press non-operational will result in making hundreds of workers unemployed. Thus, increasing the unemployment rate in the country. For instance, in 2017, a survey was conducted and it showed that due to the coming of updated technology, the unemployment rate got increased from twenty percent to sixty percent. These two are the major drawbacks of high technology.

In conclusion, the administration of the country should promote digital

books and advanced technology as it results in preserving the environment, but they should also maintain a balance ^{between} other aspects like unemployment rate and giving learning sessions to older generation.
